linkedin.com/in/mihir-panchal1

Product-minded **Full-Stack Software Engineer** with 4+ years of experience building SaaS platforms, REST APIs, backend systems, developer tools, and multi-tenant web applications using **JavaScript, TypeScript, React, Node.js, NestJS, PostgreSQL, MongoDB, Redis, Docker, and AWS**. Experienced in system design, database modeling, authentication and authorization, real-time systems, CI/CD, production debugging, and end-to-end feature ownership.

TECHNICAL EXPERIENCE

13rinda Inc.

Lead Full Stack Software Engineer

Remote, Canada

Apr 2026 — Present

- **Engineered ConDAI for 6 user groups** — platform admins, building admins, residents, owners, tenants, and external AGM proxy users — centralizing governance, voting, subscriptions, documents, communications, and audit history.
- **Implemented multi-tenant, building-scoped authorization** using **NestJS, PostgreSQL, and Prisma**, preventing cross-building data access while enforcing subscription entitlements, feature access, admin boundaries, and protected API/frontend routes.
- **Digitized manual AGM and proxy-voting workflows** across agendas, quorum tracking, unit-based voting, document verification, expiring credentials, attendance, audit trails, realtime updates, and privacy-aware admin views.
- **Solved active-meeting navigation failure** by lifting the **Zoom** runtime above route-level components, allowing users to browse documents, voting screens, and AGM workflows without disconnecting from live meetings.
- **Developed Chronicle**, a legal case-management platform that converts scattered matter data into searchable chronological workspaces across matters, participants, evidence, documents, linked events, AI insight records, and audit history.
- **Built matter-scoped legal workflows** covering access control, interactive chronology views, progressive rendering, full-text event search, inspection panels, and evidence uploads supporting up to **10 files/request** and **50MB/file** with previews and inline feedback.

devSemble

Founder & Lead Full-Stack Engineer

Mumbai, India

Jan 2024 — Present

- **Built devSemble as a developer proof-of-work platform**, helping developers convert GitHub activity, coding performance, hackathon participation, quizzes, and community contributions into public reputation scorecards.
- **Automated manual GitHub profile evaluation** through a multidimensional reputation engine analyzing repositories, commit consistency, pull requests, resolved issues, code ownership, coding attempts, hackathon scores, quiz accuracy, and community participation.
- **Built an asynchronous online judge for 5 languages** — Python, C, C++, Java, and JavaScript — using **Redis/Bull queues**, Docker-isolated runners, resource limits, test-case execution, automated scoring, and realtime **Socket.IO** results.
- **Automated hackathon and competitive-season operations** across registrations, team formation, problem selection, submissions, judge portals, weighted scoring, live leaderboards, result publishing, and lifecycle email reminders.
- **Built multi-tenant community infrastructure** using **React, Node.js, Express, MongoDB, Redis, and Socket.IO**, enabling custom subdomains, role-based administration, forms, dashboards, events, publishing, and public pages.
- **Integrated GitHub OAuth, APIs, and webhooks** to analyze repositories, estimate code ownership, calculate contribution consistency, connect commits to platform tasks, and enrich public developer profiles.
- **Managed production infrastructure** across **AWS EC2, Nginx, PM2, SSL, Redis, MongoDB, cron automation, email workflows, and deployment pipelines**.

Freelance

Freelance Full-Stack Developer

Remote

2020 — Present

- **Delivered production web applications** for startups, small businesses, academic clients, and internal teams across e-commerce, education, portfolio, and management systems.
- **Built full-stack MERN applications** with authentication, admin dashboards, payment integrations, email pipelines, media uploads, custom workflows, **AWS EC2** deployment, debugging, and direct client communication.

PROJECTS

Geo-Attendance & Defaulters Management System

Jan 2024 — Apr 2024

MSc.IT Capstone Project Team Lead

- Led development of an **AWS-deployed** geo-location attendance platform supporting peak attendance windows of approximately **3,000 active users** within a rapid **1-month** delivery timeline.
- Replaced paper-based attendance and manual Excel defaulter tracking with **geo-verified attendance capture**, centralized records, admin dashboards, and automated defaulter identification.
- Designed backend architecture, relational database models, attendance capture flows, and automation workflows while coordinating frontend, backend, and mobile UX execution across the team.
- **Technologies:** AWS, Backend Architecture, Database Modeling, Geo-location Tracking, Attendance Automation, Defaulter Management.

Travel Sage

Academic Project

React Native + MERN Travel Intelligence Platform

- Built a social travel platform where travellers shared location-specific experiences, commute details, challenges, recommendations, and itinerary notes.
- Categorized user-generated travel data into **itineraries, commute, local challenges, and place insights**, enabling more contextual travel planning.
- Developed an AI-assisted Q&A flow using **Transformer.js**, allowing users to ask travel questions and receive answers generated from community-shared experiences.
- **Technologies:** React Native, Node.js, Express.js, MongoDB, Transformer.js, MERN Stack.

SKILLS

Core Engineering	System Design, API Design, Authentication, Authorization, RBAC, Scoped Permissions, Audit Logging, Background Jobs, Realtime Systems.
Backend	Node.js, Express.js, NestJS, REST APIs, Socket.IO, WebSockets, Passport.js, JWT, OAuth, BullMQ.
Frontend	JavaScript, TypeScript, React.js, Next.js, Vite, Material UI, Tailwind CSS, Zustand, Redux, React Router, TipTap, Monaco Editor.
Data & DevOps	PostgreSQL, Prisma, MongoDB, Mongoose, Redis, AWS EC2, Docker, Linux, Nginx, PM2, GitHub Actions, CI/CD.
Languages	JavaScript, TypeScript, Python, Java, C++, SQL.

EDUCATION

Master of Science in Information Technology	2022 — 2025
SK Somaiya College, Mumbai, India	
Capstone Project: Geo-Attendance & Defaulters Management System (Project Lead)	
Bachelor of Science in Information Technology	2019 — 2022
Shree L.R. Tiwari Degree College, Mumbai, India	

LEADERSHIP & ACTIVITIES

- **Founder, devSemble:** Lead product direction, platform architecture, community partnerships, and developer-facing initiatives.
- **Speaker, IIT Bombay:** Presented collaborative team-building practices and Git-based technical workflows.
- **Technical Lead:** Led student developer initiatives, workshops, project mentoring, and technical event execution.
- **Technical Head — Technova Fest:** Led technical execution for the college fest and built the official website to centralize event promotion, registrations, event details, and participant communication.
